instant roof licenseQ: Creating attribute based on the creation of a new event record I have a problem with a condition for a report. I want to display all records in an attribute field, but I only want this to happen if a new event record has been created. I’m using an event to store the time, DateTime.now(), and if this is the first record in the database, I want it to be filled with a timestamp. With my simple query, I get all records as I want, but then I have to do more work on the page to create a different value for that field. The field to the right is the generic value assigned to all events, a ~ and if I record isn’t created, it should say that there are no records yet. This is my SQL query: select TO_DATE(TO_CHAR(MAX(extent_date_time), 'yyyymmddhh24miss'),'yyyymmddhh24miss') as current_time,
