In April 2017, Autodesk released an API for Python and the AutoCAD.org community. It uses the Python programming language to access AutoCAD's native tools, including the command-line interface (CLI) for interacting with the software. AutoCAD's CLI (the command-line interface) can be used in Python scripts. The following is an example of a Python script that has the potential to execute a user-defined action using the API.

```
import clr from AutoCAD import *
def onOpen(app): # Add a new action on Open
    acApp.AddAction("onOpen", "Do_this", [])
def onSave(app): # Add a new action on Save
    acApp.AddAction("onSave", "Do_this", [])
acApp.Initialize()
onOpen("AcDb")
onSave("AcDb")
```

AutoCAD can be accessed through the command-line interface (CLI). The CLI supports three types of commands: (1) scripting commands, (2) script commands, and (3) non-script commands. Commands can be executed using command syntax or as an argument of another command. The molecular weight distributions of the three polygalacturonases (PGs) synthesized by the *Phytophthora cactorum* zoospores were investigated by gel filtration on Sephadex G-100. *P. cactorum* synthesizes a PG with an apparent molecular weight of approximately 190 kDa, which corresponds to a single-chain polypeptide of about 138 kDa, and two other PGs with apparent molecular weights of approximately 250 and approximately 370 kDa, which correspond to the larger single-chain polypeptides and to the heterodimer (probably a homodimer of the smaller polypeptide), respectively. What's New in the AutoCAD?

Markup Assist features an "Assistant Designer" that makes creating drafts, annotating, adding and annotating feedback and sharing all in one go. With Markup Assist you can access your feedback and annotation history from any CAD application, including other designers, making it easy to make changes in the same session and collaborate at scale with your team. New tools to expedite and automate your workflow. In addition to key drafting tools, CAD applications are starting to incorporate tools designed to make your workflows more efficient and streamlined. AutoCAD 2023 brings two great examples. The new "Drafter" tool is designed to enhance the efficiency of drafting with a simple tool bar to access the most commonly used drawing features and a flyout panel for quickly selecting a tool from the entire tool library to use in the current drawing. Another tool called "Archival" can work with a template, drawing, model or any kind of existing drawing, text and layer information to create a new template. It even will recolor objects in the drawing, and automatically filter out unnecessary objects that are not relevant to the updated template. New multipage technology with Drawing and editing in separate pages. One of the more exciting new multipage features in AutoCAD 2023 is the ability to both edit and view drawings simultaneously on multiple pages. The new "MultiPage" view shows all pages of a drawing as a single viewport in addition to editing and reviewing. You can share your drawings on the web, email or create PDFs directly from the drawing window. Project Review and Analysis: Receive a comprehensive design review. The new "Project Review" option is designed to allow any team member to quickly review the changes in your project with a click. The new feature allows you to create a project review record that includes drawings, comments, metadata, comments, and actions. The Project Review dialog boxes displays a review summary with a click of the "Edit" button. Actions in AutoCAD 2023 include: commenting, annotating, reordering, erasing and re-inking. With the new document history tool you can view and edit historical information about your projects with a single click. You can roll back to a previous state, and quickly undo actions you have taken. Share your experience with AutoC
