URL Scanner is a reliable and free service to help you stay in control of your computer, monitor and make sure it's not wasting time or producing unnecessary noise. A: URLScanner has been made obsolete. It's not available anymore. I will have to find a replacement. The URLScanner Forum looks like a good place to start. b7e8fdf5c8

URL Scanner

Our URL scanning tool has been used in a number of high profile companies to help in monitoring and controlling employee internet usage. It is a free tool that has a web based user interface that allows quick setup, installation and running of the program. Users just need to enter their username and password, and then the program automatically detects web browsers on their system and starts crawling all URLs. Once a URL has been processed, information (including website title and URL, IP address, time and date, time spent on the page, content of the page, referrer URL, exit URL and key words that were found in the URL), is saved to the database. This information can then be viewed in any database program such as Microsoft Access, SQL Server or Oracle. Main features: - Supports browsing over web and mail protocols - Able to scan more than one IP address at a time - Can monitor/control from any web browser - Can be set to automatically run at a preset time and date - No need to be connected to the network while it is running - Can be scheduled to run at a preset date and time, or can be set to run when the computer starts - Individual reports for each user - Scans URLs from any folder - Built in support to delete or overwrite URLs scanned - Can be configured to allow or block URLs from being viewed - Can be configured to allow or block mail-to-urls from being viewed - Can send log files/mail messages of URLs and IP addresses scanned - Can be configured to pause URL and mail-to-URLs scans (if URL Scanner is configured to do so). - User accounts can be setup to have a maximum time limit for URL and mail-to-URL scanning - Can have a list of keywords that are censored (i.e. "download", "support") - Can have a list of IP addresses that are censored (i.e. "www.google.com" and "192.168.1.1"). - Unlimited number of URL crawling sessions can be configured. - Completely configurable with the ability to include or exclude URL/mail-to-URL scans from users based on one or more user accounts. - Can include or exclude URLs/mail-to-URLs based on time. - Can be configured to run whenever your computer starts or at a specified time and date. - Excluded websites: The following websites

What's New in the URL Scanner?

Stores all recorded URLs with time, IP address and web browser used, among others. Read the web history of the time period you specify. Optionally, you can specify a regular expression you want to look for. Periodically check for your domains or sites to see if they've been active. URL Scanner Features: * Possibility to set a custom start and end time period to scan. * Customizes the time period it checks for. * See exactly which URLs the web browser visited in the specified time period. * Includes all URLs typed by the user into the browser. * Lets you see which URLs were visited the most during the specified time period. * It's easy to install and set up. * A detailed description of what's stored in the database. * No installation required. * You can change the location where the database is stored. * Scheduled startup and scheduled shutdown of URL Scanner. * Can select the size of the log file. * Supports URLs with special characters (e.g. &, +, etc.). * Can write into one or more databases simultaneously. * Reads logs from several files. * Supports for all other operating systems besides Windows. * Frequently asked questions. * Free sample download, simply click on "screenshot". Introduction: All the spreadsheets use same row to record additional data, additional information. In order to get the additional data, you need to download and install the program to the Excel. The Spreadsheet program is designed to record additional data for the bills or bills for each click separately. In addition, it will make the data easily accessible when needed. This spreadsheet program designed to save additional data for each separate bills or bills for each click separately in order to get the additional data. In addition, the added data will make it easier for you to decide and store the data to be easily accessible when needed. Interpretor for the Beep command is a Windows Service that runs in the background to let you hear the beep program for each command. The Beep command is useful in case you need to interrupt the user using the program without closing it. The service monitors each command and beeps each one you type in the window, except the control characters used to create features of the beep program (such as "msdos" beeping). R
