More information about FromSoft Corporation can be found at www.fromsoft.co.jp What is the difference between an equilateral triangle and an isosceles triangle? Answers 1 A : An equilateral triangle is a triangle with all 3 sides equal. Isosceles triangles have the top and bottom angles the same and are "sickle" shaped. 3 C and D are right angles, and B and C are acute angles, so I'm not sure if it's already answered or not, but if it hasn't, then D is an obtuse angle.For centuries, humanity has struggled to understand its place in the universe. And while the answer is "we don't know", as recently as the last century most of us were taught that we are on Earth and that life will die out at some point in our near future. What we now know is that life is far more common than we ever imagined, and our planet is just one of billions. All of these discoveries have led us to an unsettling new truth: Humanity is not alone. The implications of that realization are profound. The human race is now part of a cosmic fellowship, a unique cooperative arrangement which includes, among others, the universe itself, alien life, and far-flung worlds so remote that we have yet to make contact. Living with others and understanding the universe are not mutually exclusive, and we can learn a great deal from our cosmic brethren.
